

大学英语四级考试2025年12月真题（第三套）

Part I Writing (30 minutes)

Directions: Suppose your university is organizing a forum on how students can make the best use of on-campus resources for academic development. You are now to write an essay to express your view. You will have 30 minutes to write the essay. You should write at least 120 words but no more than 180 words.

Part II Listening Comprehension (25 minutes)

特别说明: 由于多题多卷,官方第三套真题的听力试题与第二套真题的一致,只是选项顺序不同,因此,本套试卷不再提供听力部分。

Part III Reading Comprehension (40 minutes)

Section A

Directions: In this section, there is a passage with ten blanks. You are required to select one word for each blank from a list of choices given in a word bank following the passage. Read the passage through carefully before making your choices. Each choice in the bank is identified by a letter. Please mark the corresponding letter for each item on **Answer Sheet 2** with a single line through the centre. You may not use any of the words in the bank more than once.

Earth Day is an annual celebration that honors the achievements of the environmental movement and raises awareness of the need to protect Earth's natural resources for future generations. Earth Day is celebrated on April 22 in the United States and on either April 22 or the day the *spring equinox* (春分) occurs throughout the 26 of the world.

Environmental activism during the 1960s 27 Wisconsin Senator Gaylord Nelson to create a 28 celebration uniting the environmental movement. With the help of Denis Hayes, a graduate student at Harvard University, Nelson organized the first Earth Day on April 22, 1970, educating participants in the 29 of environmental protection. Attended by 20 million people across the United States, the event 30 support for legislation such as the Clean Air Act and the Endangered Species Act.

In 1990, Hayes organized a global Earth Day, with more than 200 million participants in 140 countries. Earth Day now brings 31 citizens and activists from around the world to raise awareness and take action regarding such environmental 32 as global warming and renewable energy.

Today, the Earth Day Network, which rallies more than 20,000 33 and organizations in 190 countries, supports the Earth Day mission year-round. This mission is founded on the proposition that all people, regardless of race, gender, income, or 34, have a moral right to a healthy, sustainable environment. The Earth Day Network 35 this mission through education, public policy, and activism campaigns.

Section B

Directions: In this section, you are going to read a passage with ten statements attached to it. Each statement contains information given in one of the paragraphs. Identify the paragraph from which the information is derived. You may choose a paragraph more than once. Each paragraph is marked with a letter. Answer the questions by marking the corresponding letter on **Answer Sheet 2**.

Looking for a job after 45

- A) Ageism and long-term unemployment are most damaging for those in the second half of their careers. Changing careers is hard. Getting back into work after you've been laid off is even harder. Those over 45 make up the bulk of the long-term unemployed, in America and elsewhere. Hiring managers admit they are reluctant to hire those over 40 or 45, arguing they probably won't be a good "fit," their experience won't be relevant to the workplace, and they'll be unable or unwilling to learn new skills.
- B) But the one thing that can really make a difference? More education and training. These are the results from a new study by Generation, a nonprofit founded by former McKinsey consultants. They've just published a global survey on midcareer employment, based on surveys of over 5,000 workers and managers in seven countries.
- C) "Older midcareer workers...make up the bulk of the long-term unemployed in many countries," Generation's analysts write in their report. Those over 45 comprise over 40% of the long-term unemployed, for example. And if you're out of work past the age of 45, there's nearly a two in three chance you'll be out of work for over a year, they find. "Midcareer individuals are finding it harder to get jobs," they write. "People age 45+ face persistent and rising pressure in the global job market. They are unemployed for much longer than the average, and their age is indeed one of the greatest barriers to their finding a job."
- D) A substantial part of this, they report, is "widespread ageism" on the part of hiring managers. Although such managers admit that post-45 hires turn out on average to be just as good as or better than younger workers, they still don't want to hire them. "Hiring managers have a strong perception bias against 45+ job candidates—they believe that members of this age group have poor skills and low adaptability," Generation's analysts report.
- E) The survey results are remarkable. Hiring managers are three times as likely to rate job applicants age 35-44 as a better "fit" than those over 45. They rate the post-45 job seekers lower on average on all three measures—even experience—than those ages 18 to 34. This is true even though nearly nine managers in 10 also said their post-45 workers were as good as or better than younger employees in the same jobs.
- F) Their biggest fears about hiring those over 45? Managers said they worry that older hires will be reluctant to try new technologies, and will be unable to learn new skills. Besides, the majority of hiring managers are under 45—and seem reluctant to hire people older than themselves.

- G) But here's the good news. Older workers who've actively engaged in more education and training relevant to their jobs turn this pretty much on its head. Three-quarters of hiring managers said they'd be more likely to hire an over-45 who had relevant education, training or *credentials* (文凭). Among those over 45 who'd successfully switched careers, 74% said training helped them get their new job.
- H) "Midcareer switchers overwhelmingly say that training enabled them to shift to a new career path," the analysts write. And when they asked over-45 candidates about their attitudes, they found that "those who are excited by training are unemployed for less time, receive more job offers, and are more satisfied by the job offers they receive."
- I) Hiring managers said training was three times more likely to get them to hire applicants over age 45 than, say, government *subsidies* (补贴). What training are we talking about? Obviously it depends on the job. And, yes, managers are most likely to be impressed by industry qualifications you get in school. These things cost money, and time. But these aren't the only things helpful. Those who had successfully changed careers after 45 told Generation that education and training had been a big help—and that included in-person, on-the-job training, "informal learning," and online courses—with or without certification.
- J) If they think we're too old to learn new skills after we're 45, just learning some new skills may have an effect on its own. There's a downside to this. The people least interested in retraining are more likely to come from historically disadvantaged communities, more likely to have low incomes, and are more likely to have the least schooling after getting their high-school diploma or earlier. On average, post-45 job switchers with higher incomes participate in 2.5 training programs each. Those with lower incomes: 0.9 programs on average.
- K) Many years ago, I wrote about a study which found that employers are much more likely to hire a college graduate who has some work experience in the industry than a college graduate who took the "right" degree. A bank is more likely to hire a literature graduate who spent their summers working in their local bank than a finance or economics graduate who spent their summers surfing or traveling around Italy. They've learned through long experience. The person who worked in the bank is more likely ready, willing and able to be part of the team and do the job from day 1.
- L) We can rail against "ageism" all we like. It gets us nowhere. And it's easy to forget that employers, like everyone else, are under time pressure and are just trying to solve problems. Any and all "training," including inexpensive and informal training, is going to help resolve their worries about hiring someone over 45. And it has never been easier or cheaper to gain instruction in new skills, thanks to the internet. Online schools like Udemy and Lynda.com offer sweet deals at sign-up. And courses on YouTube are free.
- M) Bottom line? Yes, it really can be difficult getting a new job after age 45, let alone changing careers. One of the best things we can do to help ourselves is to go online and learn new, relevant skills. Sadly, the people who most need the help are least likely to take it—which raises a challenge for society as a whole. Not only do we not want to see lives go to waste, but we all benefit if more people are working and fewer are unemployed.
36. Hiring managers believe unemployed workers over 45 lack good skills and are less adaptable.
37. Switching to a new career is difficult and getting reemployed after a layoff is even tougher.
38. People from poor neighborhoods tend to have the least interest in retraining.
39. Hiring managers who are not yet 45 years old seem unwilling to hire people their senior.
40. Some analysts find age 45+ jobless workers are most likely to be unemployed for more than a year.
41. People who had succeeded in career change after 45 told a nonprofit organization they owed a great deal to

the education and training they had received.

42. Older workers who actively pursue more education and training have a good chance of being hired.
43. A new study finds that more education and training helps midcareer individuals find a new job.
44. Owing to the internet, it is now more convenient than ever to receive training in new skills.
45. People over 45 stimulated by training suffer shorter periods of unemployment, get more job offers and have greater satisfaction in them.

Section C

Directions: There are 2 passages in this section. Each passage is followed by some questions or unfinished statements. For each of them there are four choices marked A), B), C) and D). You should decide on the best choice and mark the corresponding letter on **Answer Sheet 2** with a single line through the centre.

Passage One

Questions 46 to 50 are based on the following passage.

New York's Eleven Madison Park has become the first *vegan* (素食主义的) restaurant to be awarded three Michelin stars.

The fine dining establishment received its first three-star Michelin rating in 2011 when the menu was famed for its fancy animal-based dishes.

However, last year, the restaurant's co-owner and famous chef, Daniel Humm, made the bold decision to remove meat from the menu, citing our unsustainable food system. While cow milk is still served for tea and coffee, the menu is almost 100 percent vegan.

At the time, Humm acknowledged the move was risky, admitting that "it wasn't clear if guests would come", but called the gamble "a risk worth taking."

"In view of the climate crisis, I didn't want to open the same restaurant," Humm told the *Financial Times* in an interview. "If we can show the possibilities of eating plant-based food in this setting, it can open a lot of doors" for others to follow.

Now, this impressive new accomplishment validates Eleven Madison Park's decision to take meat off the menu and embrace plant-based foods, with Michelin's 2022 New York guide branding it a 'bold vision of luxury dining'.

"We took the jump to transform Eleven Madison Park into a plant-based fine dining restaurant knowing in our hearts this is what we believed in," stated Humm on Instagram. "Last night, we were honored to be awarded three Michelin stars for the 11th year in a row. I am so grateful to the team members who contributed through its nearly 25-year history. We are also grateful to our guests and partners who believed in our vision and encouraged us to push harder."

Three Michelin stars is the highest award, given to chefs who are at the peak of their profession. "Their cooking is elevated to an art form and some of their dishes are destined to become classics," reads Michelin's website, in a clear nod to plant-based foods' growing significance in the *culinary* (烹饪的) world.

"I think luxury companies have a real role to play and a responsibility," says Humm. "The more creative we are, the more beautiful and delicious our future will be."

46. What do we learn about New York's Eleven Madison Park?

- A) It is the first vegan restaurant to receive the highest Michelin rating.
- B) It is the first restaurant in the city to remove meat from its menu.

- C) It was famed throughout the U.S. for its fancy regional dishes.
D) It was established as a three-star Michelin restaurant in 2011.
47. Why did Daniel Humm decide to remove meat from the menu of his restaurant?
A) To encourage more customers to be vegan. C) To show the appeal of a plant-based menu.
B) To contribute to a sustainable food system. D) To strive for the three-star Michelin rating.
48. What did Daniel Humm think of his move to a meat-free menu?
A) It was a worthwhile effort even though he was unsure of its success.
B) It would set a model for many more restaurants to follow.
C) It was a mad gamble few chefs in the fine dining world would risk taking.
D) It would prove a right step to take in today's catering business.
49. What does Michelin's 2022 New York guide say about Eleven Madison Park's decision?
A) It elevates the restaurant's cooking to an art form.
B) It proves the validity of ratings awarded by Michelin.
C) It shows a daring foresight regarding future fine dining.
D) It is an effort to transform the restaurant into a luxury one.
50. What does the awarding of three Michelin stars to Eleven Madison Park indicate?
A) An optimistic vision of vegan foods becoming mainstream.
B) A greater responsibility for the culinary world to undertake.
C) A strong incentive for more restaurants to offer healthier foods to their customers.
D) An explicit recognition of the rising importance of restaurants serving vegan foods.

Passage Two

Questions 51 to 55 are based on the following passage.

With genetic testing becoming increasingly popular, many people are left wondering exactly how accurate it is. Whether you are taking a DNA test to build your extended DNA family tree, or want precise information on *inborn* (先天的) health conditions, it is important to understand how accurate genetic tests are, and what information we can rely upon.

How accurate DNA tests are relies greatly upon the kind of test being taken, on the specific question you ask, and on how complex the genetics behind a *trait* (特征) is. For example, tests for traits that depend on a single gene provide much more reliable results, because you can see whether a disease-causing trait is present.

Ancestry tests claim to reveal our genetic identities. But saying you are 30 percent East Asian or American hardly reflects your real ancestry.

What about using DNA tests to discover distant family members? There are tools to compare one's DNA with others' to find distant relatives based on their genetic identification. These kinds of applications are generally accurate. It's relatively easy to tell whether two DNA samples belong to close relatives. With distant relatives, results become hazier.

Genetic health tests claim to be able to detect certain *hereditary* (遗传的) diseases, or other health conditions. While certain rare diseases can be easily identified, most potential health conditions cannot be identified by genetic testing alone. The large majority of our traits and diseases also depend upon non-genetic factors, such as lifestyle, the environment, and many others.

Genetic tests for multi-factorial traits are often very tricky to interpret. Height, for example, depends on hundreds of genes, each contributing a little to the outcome, together with a bunch of environmental factors. A
